# Name Tag Assembly Instructions

1. Bend the legs of each LED 90° in opposite directions.

2. Insert the LEDs (wire first) with the **flat side toward the back** into the holes & bend the wire to hold in place.

3. Create a cross-wire on the back side by threading wire through the two opposite pairs of holes and twisting tight. *If the wire is long enough make a full loop and twist tight at one end.*

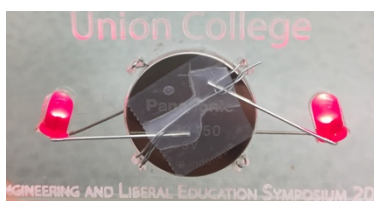

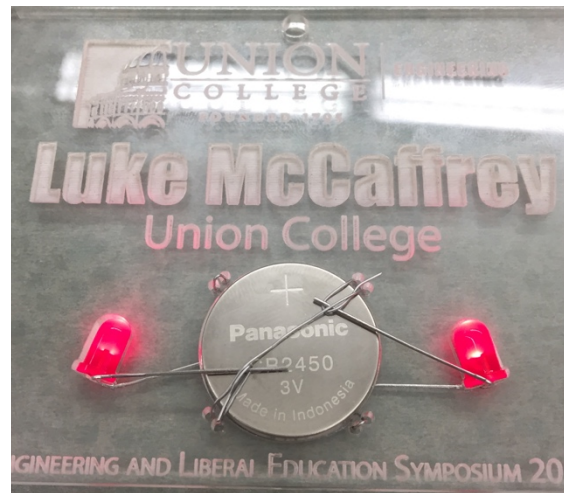

5. Place the battery in the hole on top of the cross-wire.

4. Repeat the wiring process on the front as done before.

Use whatever technique necessary to provide best connection

TIP: Add a piece of tape if a good connection cannot be achieved.
